Professional Summary

Software Developer with 2+ years of experience in Full Stack Development, Backend Engineering, and Mobile Application Development using Laravel, PHP, MERN Stack, React.js, Node.js, and React Native. Experienced in designing scalable REST APIs, implementing OAuth and JWT-based authentication, developing workflow automation systems, CMS platforms, microservices, and real-time applications using Redis and WebSockets. Strong background in database design, MySQL optimization, role-based access control (RBAC), caching strategies, API integration, and enterprise application development. Proven ability to collaborate across product, frontend, and QA teams to deliver secure, maintainable, and scalable software solutions.

Technical Skills

Programming Languages: PHP, JavaScript (ES6+)

Backend Development: Laravel, Node.js, Express.js, MVC Architecture, Middleware, REST API Development, Authentication & Authorization, RBAC

Frontend Development: React.js, HTML5, CSS3, Bootstrap, React Hooks, State Management, API Integration

Mobile Development: React Native CLI, React Native Expo, Navigation, Redux, Mobile API Integration

Authentication & Security: OAuth, JWT Authentication, Token-Based Authentication, Route Protection, Permission Management

Databases & Caching: MySQL, MongoDB, Redis (Caching, Queues, Pub/Sub), Database Optimization, Query Optimization, Indexing

Real-Time & Distributed Systems: WebSockets, Redis Pub/Sub, Microservices Architecture, Background Processing

Tools & Platforms: Git, GitHub, Linux, Postman, VS Code

Development Practices: Agile Development, Responsive Design, API-First Development, System Design

Professional Experience

Software Developer | The NexGen Tech, Chennai

Apr 2024 – Present

- Design and develop scalable backend applications using Laravel and PHP for enterprise software solutions.
- Architect and implement RESTful APIs supporting content management, workflow automation, user activity tracking, and business operations.
- Develop OAuth-secured authentication and authorization mechanisms, ensuring secure access control and protected API communication.
- Integrate Laravel backend services with React.js frontends through optimized API structures and reusable service layers.
- Engineer multi-level workflow automation systems with configurable approval routing and business process management capabilities.
- Implement Redis-based caching, queues, and WebSocket integrations to support real-time notifications and improved application responsiveness.
- Build modular microservices for authentication, workflow management, and content operations to improve maintainability and scalability.
- Optimize MySQL database performance through indexing strategies, query optimization, and caching mechanisms.
- Collaborate with product managers, frontend developers, and QA teams throughout requirements gathering, development, testing, deployment, and production support.
- Troubleshoot production issues, maintain application security standards, and ensure system reliability across deployments.

Key Projects

CMS Platform

Technologies: Laravel, PHP, React.js, MySQL, OAuth, Redis

- Developed a content management platform featuring dynamic content modules, administrative controls, and role-based access management.
- Designed and integrated REST APIs between Laravel backend services and React.js frontend applications.
- Implemented OAuth-secured authentication and permission-based authorization policies.
- Leveraged Redis caching to improve application responsiveness and reduce database load.
- Developed scalable database structures to support content lifecycle management and administrative operations.

Approval Workflow Automation System

Technologies: Laravel, React.js, REST APIs, Redis, WebSockets

- Built a configurable multi-level approval workflow engine supporting complex business approval processes.
- Implemented real-time workflow notifications using WebSockets and Redis Pub/Sub.
- Developed secure OAuth-protected APIs for approval actions, workflow transitions, and audit logging.
- Integrated workflow services with React.js dashboards for live process monitoring and tracking.

- Automated approval processes to improve workflow visibility and operational efficiency.

Microservices-Based Backend Architecture

Technologies: Laravel, REST APIs, Redis, OAuth

- Developed modular microservices for authentication, workflow processing, and content management operations.
- Implemented distributed OAuth token validation across service boundaries.
- Utilized Redis queues for asynchronous processing, notifications, and background task execution.
- Improved backend maintainability through service decoupling and modular architecture design.
- Enhanced scalability and fault isolation across application components.

Chennai Parking System

Technologies: MongoDB, Express.js, React.js, Node.js, REST APIs

- Developed a full-stack parking management platform using the MERN stack.
- Implemented vehicle entry and exit tracking with parking slot management functionality.
- Designed authentication and authorization mechanisms for administrative and user access.
- Built RESTful APIs for parking reservations, vehicle management, and reporting operations.
- Integrated MongoDB for efficient data storage, retrieval, and management.
- Developed responsive React.js dashboards for monitoring, reporting, and operational management.

Eloupra QR Scanner App

Technologies: React Native CLI, Laravel API, MySQL, REST APIs

- Developed a cross-platform QR scanner application using React Native CLI.
- Implemented QR code scanning, validation, and secure API communication workflows.
- Integrated Laravel backend APIs for authentication and business data processing.
- Built reusable mobile components, navigation structures, and responsive user interfaces.
- Enabled real-time synchronization between mobile clients and backend services.
- Improved application stability through testing, debugging, and performance optimization.

Mobile Application

Technologies: React Native Expo, Laravel API, Redis

- Developed a cross-platform mobile application integrated with Laravel-based backend services.
- Implemented authentication workflows, navigation systems, reusable UI components, and state management.
- Connected mobile clients to Redis-backed services for efficient data access and synchronization.
- Designed an extensible application architecture supporting future feature enhancements.

Education

Master of Computer Applications (MCA) Dhanalakshmi Srinivasan Engineering College, Perambalur	2021 – 2023
Bachelor of Computer Applications (BCA) Imayam Arts & Science College, Thuraiyur	2018 – 2021
